Carpet Tile Advantages

Lifelong Antimicrobial Protection

All Nexgen series products are equipped with stain-resistant and antimicrobial functions as standard. The antimicrobial formula has the same health and environmental protection properties as personal and household care products, which can effectively inhibit the growth of bacteria, fungi, mould, and algae. Nexgen's unique process ensures that the antimicrobial quality is effective throughout the life cycle of the products.

In order to achieve the best antimicrobial effect, it needs to be combined with proper daily cleaning and maintenance. For more details, please refer to the "Nexgen Carpet Tile Maintenance Guidelines."

Environmentally Friendly Middle Layer – DINCH

The middle layer of all Nexgen products is produced by the use of DINCH. DINCH has the characteristics of non-toxic safety, high environmental protection, excellent low temperature resistance, no mold / fungal growth, good processing performance, and long service life. DINCH is specially developed for human contact applications and is one of the most stringently tested plasticizers on the market today.

DINCH is considered a safer substitute for traditional phthalate plasticizers (such as DEHP), which are in restricted use due to the potential health risks. On account of its excellent toxicity test results, DINCH has been approved and certified by many prominent institutions around the world (REACH, FDA, NSF).

Thoughtfully designed carpet tiles that bring balance, texture and quiet sophistication to every space

Designed for today. Made to last.
